How the colour labelling system works

Svensk Transfer's colour labeling system provides a complete and user-friendly system for monitoring the control and calibration status of measuring equipment.

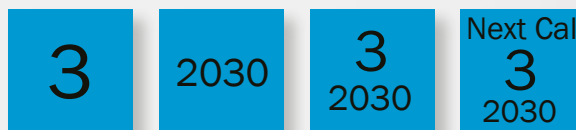

The system consists of labels which you can attach to any measuring equipment in order to make sure you know when it is time for new calibration, maintenance, control or service. It is easy to understand and can also be used in other contexts requiring periodic surveillance.

Our system is based on periodic yearly colour labelling. A blue, yellow, green or orange adhesive label is attached to the measuring equipment. The label indicates the last year and month of use before new calibration, maintenance, control or service. Yearly colours are periodical and recur every four month.

It is primarily the user who needs information about the status of the equipment. Our system is therefore an important element also in computerised systems and procedures for monitoring measuring equipment. Companies with computerised registration and calling systems for measuring equipment maintenance, shall make sure that the calibration status is indicated on the measuring equipment itself.

When is it time to calibrate?

Measuring instruments should be calibrated the month indicated on the colour label or whenever a change may be foreseen.

The adhesive label comes in four different formats, showing the number of the month, the year, month and year or with month, year and Next Cal to clarify when the next calibration should take place.

Our offer

Our labelling system is an important part of the quality work. We offer a complete binder containing 48 sheets in the colors blue, yellow, green and orange indicating number of expiration month. As a complement we offer single sheets with labels indicating last year of use. For companies and calibration facilities with a high consumption, the labels are also available on rolls which may be supplemented with a special dispenser and holder containing stackable decks. The rolls indicate both month and year. Associated to the labelling system we have information posters in A4 and A2 format showing the relationship between colour and year.

Binder containing a complete labelling set of sheets in the colors blue, yellow, green and orange indicating number of expiration month. Article number 1500

Strip with monthly and annual number of expiration, 9 x 180 mm.

One sheet contains 594 labels, 9 x 10 mm.

More labels

As a complement to the colour labelling system we offer additional labels in order to further indicate the calibration status of the measuring equipment, 50 x 20 mm.

Zero marking is a brown label with the number zero which indicates that the instrument does not have a fixed time for maintenance. Used as an alternative to No Calibration needed.

Calibrate in Time consists of

- Labels indicating the month - sheet and roll
- Labels indicating the year - sheet
- Labels indicating month and year - sheet and roll
- Labels indicating month, year & Next Cal - sheet

We also offer additional labels in order to further indicate the calibration status of the measuring equipment.

Information posters are available in A4 and A2 format.
